

QuickQube

Book more business with QuickQube, the first and only automated estimating tool designed exclusively for the commercial office and industrial moving industry.

QuickQube improves your productivity and helps you build your business.

Here's What QuickQube Can Do for YOU.

- **Increase Your Productivity:** You'll book more business in less time when you use QuickQube
 - Cut your proposal preparation time by up to 75%
 - Save 2/3 of the time you currently spend generating work orders
 - For many jobs you'll be able to present your proposal immediately after you finish the job walk
 - New sales people will get up to speed faster when they're using QuickQube
 - No more lost paperwork – everything's at your fingertips in QuickQube, from origin and destination access information to inventories of what's moving and what's not. All your notes are there too. Everything's in one place.
- **Eliminate Errors in Your Estimates:** QuickQube does the calculations for you - no more math errors that cost you money.
- **Differentiate You and Your Company from the competition:** QuickQube's speed and accuracy will set you apart. Prospects won't believe how responsive you are compared to other movers.
- **Supports All Standard Estimating Methods:** QuickQube does them all. Whether you estimate by cubes, dolly loads, truck loads, weight or piece count, QuickQube does it your way.

Making sure you take into account all the access conditions at origin and destination is critical to being able to come up with the right pricing for a move. From long carries to stairs and elevator transfers we've got you covered. When you set up QuickQube you enter factors that tell QuickQube how much you normally adjust your crew size for many common access issues (e.g, for every flight of stairs add 10% to the estimated manpower requirements). As you gather more access information and enter it during the job walk QuickQube will instantly adjust its manpower and pricing calculations accordingly.

Get the Job Walk Done Quickly and Easily

- **The Job Walk Inventory screen is where you'll do your inventory. Think of it as being a computerized version of your tally sheet or cube sheet.**

With QuickQube you can create as many different types of tally sheets (we call them custom inventories) as you want, each with its own unique list of items.

If you do a lot of moves for law firms you can have a predefined tally sheet that only includes the items you typically need for that kind of move. QuickQube comes with custom inventories already set up for standard offices, schools and classrooms, libraries and file rooms, medical offices, warehouses, module furniture and more. You can set up as many more custom inventories as you like and you can modify QuickQube's standard ones to fit your exact requirements

If you're in the middle of a job walk and have to count an item that's not on your current custom inventory sheet you can quickly and easily add it on the fly. If it's in your master list you can import it in just a couple of clicks. Or, you can copy or clone an existing item and change its properties (like when you come across an extra large desk). Or you can create new item from scratch.

Great Western Leasing | Created: 07/29/2008

Cost Summary:

Description	Line #	Total \$
Origin 1		\$17,270.00

QuickQube's intuitive interface makes the program easy to use.

Our streamlined workspace and easy-to-use tabs make program features easier to find and use.

QuickQube Calculates Estimates in a Flash

- See the Current Move Cost Anytime.

QuickQube's Cost Summary screen gives you a real-time look at what the move will cost at any time during the Job Walk. If you're half way through a big job walk and want to know where you're at so far, just click over to the Job Summary screen and take a look. If you haven't had a chance to enter the all the particulars of the job (origin and destination access information, special services, etc.) the Job Summary screen will show you the current calculated cost based on your default settings. Typically, that might be ground floor to ground floor, no access issues, a shuttle move using tractor trailers. QuickQube will use whatever defaults you have configured.

- QuickQube Is Always Up To Date.

As you enter access adjustments, change truck types or manually adjust costs for any aspect of the move, the Job Summary screen automatically refreshes and calculates the move cost based on the most current data.

Leverage Your Best Salespeople's Expertise

QuickQube lets you set up access adjustments and other factors that affect estimate costs based on your own experience or the experience of your most knowledgeable sales rep. Once that "expert knowledge" is in the system it's available to everyone using the application.
